# **Certified Organic Production in Canada 2004**

## **1. INTRODUCTION AND METHODOLOGY**

Canadian Organic Growers has tracked the growth in the number of certified organic farms since 1992. For 2003 a more detailed study was undertaken for the federal government by Anne Macey which attempted to cover all aspects of the organic market including exports and retail sales. The 2004 survey was limited to the number of certified operators, acreage and value of production.

All organic certification bodies (CBs) known to be operating in Canada were contacted (see Appendix A) and information requested on numbers and types of certified operations, acreage and production values for each province where they are active. See the questionnaire Appendix B. The CBs were offered financial assistance to help with extracting the data from their files, but the exercise remains problematic for some. In the case of QAI and CCOF the information was obtained from their public access databases with search capabilities.

COG received assistance from the CAAQ in Quebec, COABC in British Columbia and ACORN in Atlantic Canada. In cases where acreage data was not provided by the certifier, attempts were made to gather this information directly from certified producers but data collected by this method is incomplete. There is also ongoing collaboration with Rosalie Cunningham of Alberta Agriculture and Jeff Nimmo of the British Columbia Ministry of Agriculture and Lands who are gathering information on organic production in these provinces, and with Statistics Canada as they prepare for the 2006 Census of Agriculture which will include questions on organic production.

Several CBs do not collect sales data and do not provide a list of operators with contact information; therefore the value of production has been estimated in a number of different ways. These include:

- total production value provided by the CB.
- estimates based on number of members of a CB in each membership category where fees paid correspond to gross sales categories.
- value of production estimated from crop acreage planted, average yields and price paid for crops in 2004.
- value of production for livestock products estimated from livestock numbers and product quantities.

Canadian Organic Growers would like to thank all certifiers and individuals who provided information for this report. The work of collecting statistics is ongoing. We hope any persons aware of relevant information or research will forward it to COG in order to help us provide increasingly accurate information about organic production in Canada from year to year.

## 2. PRODUCTION

### 2.1 Number of Certified Organic Farms

Numbers of certified enterprises in Canada continue to increase. In 2004 there were 3670 certified organic farms, an increase of 10.6 % from the 3317 reported for 2003. This represents 1.5% of the total number of farms in Canada (246,923 as reported in the Statistics Canada 2001 Census of Agriculture). If it is assumed that overall farm numbers are decreasing by five percent a year a value of 1.7% is a more likely figure.

**Figure 1. Number of certified producers in Canada 1992-2004**

Rates of growth vary considerably between provinces. Saskatchewan and Quebec have the highest number of organic farms and the highest growth rates.

**Table 1. Certified Organic Producers in Canada in 2004**

Province	Number of producers	Percentage of total farms in province	Percentage increase since 2003	Number in transition*
British Columbia	442	2.2	5.2	78
Alberta	254	0.4	3.6	12
Saskatchewan	1245	2.5	18.7	64
Manitoba	223	1.2	5	26
Ontario	489	0.8	0.4	34
Quebec	900	2.8	13.5	35
New Brunswick	36	1.2	0	2
Nova Scotia	50	1.3	11	2
Prince Edward Island	26	1.4	13	3
Newfoundland	3	0.4	0	1
Yukon	2			1
Total	3670	1.5		258

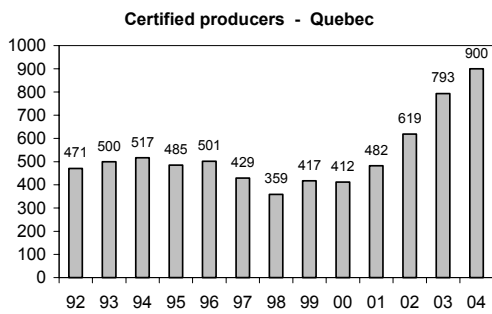

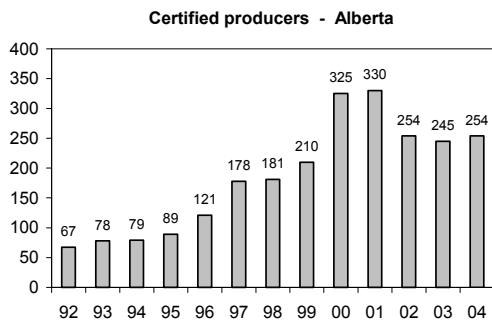

\*incomplete data

Numbers of certified operations in Atlantic Canada remain small although they are no different from the national average in terms of the percentage of total farms in each province. In Quebec crop and livestock farms increased 13% to 476 in 2004 from 421 in 2003 and maple syrup producer numbers increased by 14% to 424 from 372 (data supplied by CAAQ).

There has been little change in Ontario, and only modest increases in Manitoba, Alberta and British Columbia whereas Saskatchewan continues to show dramatic growth. These numbers include producers working lakes for wild rice – 136 in Saskatchewan, 33 in Manitoba.

In British Columbia the increases have occurred in CBs with ISO accreditation while the regional certified CBs have shown a slight decline in numbers of certified operators. It is not possible to determine whether producers have transferred their certification to another agency or whether smaller operators have dropped out of the certification process. There are more transitional farmers in BC than in any other province.

**Figure 2:**  
**Number of certified producers**  
**Provincial totals 1992-2004**  
 Source: Data collected by Canadian Organic Growers

## 2.2. Type of Farm Operation

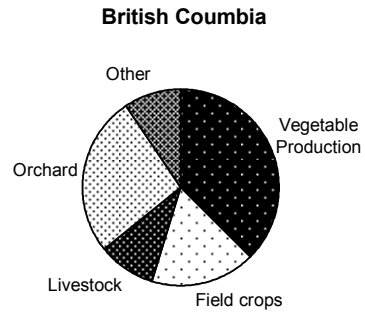

Organic farm operations reflect the bioregional diversity across the country and are similar to what one would expect in conventional agriculture with a focus on grain growing on the Prairies, dairy production in Ontario and Quebec, tree fruits in BC and so on. Many of the farms with livestock also have some crop production. In Table 2 the field crops category includes cash crops, grain grown for feeding livestock on the farm and hay. The vegetable production category includes market garden type operations with mixed vegetable, herb and fruit production as well as larger scale operations focusing on a few main crops. In Atlantic Canada and Quebec berry production includes cranberries and wild harvested blueberries.

**Table 2. Type of organic farm enterprise**

Type of Enterprise	Total	BC	AB	SK	MB	ON	QC	NB	NS	PEI	NF	YK
Vegetable Production	632	189	21	19	30	136	173	22	24	14	2	2
Field crops - grains, oilseeds, etc	2140	86	198	1079	162	328	264	5	5	12		1
Livestock	598	48	58	168	21	149	135	7	11	1		
Orchard	189	133	2	5		25	12	1	8	3		
Berries	67	16	2			9	23	6	7	3	1	
Vineyard	29	22				6	1					
Maple syrup	438					5	424	7	2			
Mushroom	14	9				2		2		1		

One farm may have more than one type of enterprise. Frequently the CB provided data which identified the farm under the main type of operation. For example Orchards do not include all producers with some tree fruit on the farm.

**Figure 3:  
TYPE OF PRODUCTION**

## 2.2 Acreage in Organic Production

In 2004 there were at least 485,288 hectares (1,199,172 acres) in organic crop production in Canada and an additional 57,077 hectares (141,040 acres) of transitional land being farmed organically.

**Table 3. Acreage in Organic Production 2004.**

\* Incomplete data

Numbers in Table 3 should be used with caution. Data is known to be missing for some producers in Ontario and in Alberta, and one certifier in Atlantic Canada and one in Saskatchewan only provided estimates.

The wild land category includes native pasture and community rangelands, woodlots, riparian areas and other wild land on organic farms. The Quebec figure represents a portion of the maple forest used for organic production but not all. Maple forest is not included for the other syrup producing provinces. The intention is to try and get better data for this category in the future and collect specific information on acres of land used for the collection of wild crops such as wild blueberries or herbs. Transitional acres were not reported by all certifiers.

Acreage reported in Tables 4, 5, 6 and 7 should be considered minimum values. Breakdowns by crop type were not available for all certifiers and not all producers were represented in the data provided. For the Prairies one CB provided a total acreage for each crop in the Prairie region and provincial totals were estimated using an approximate percentage for each province. Difficulties were also encountered in determining breakdowns for forage crops and permanent pastures.

**Figure 4: 2004 Acreage in organic production by province**

### 2.3.1 Vegetables and Herbs

Organic vegetables including potatoes were grown on 2,600 hectares (6,423 acres) in 2004 and also on some of the 659 hectares (1,629 acres) of unspecified 'fruit, vegetables and herbs'. 2004 was the first year a large acreage of organic potatoes has been reported for Saskatchewan. For vegetable crops in general the majority of production occurs in British Columbia (798 hectares/1,970 acres), Quebec (560 hectares/1,383 acres) and Ontario (455 hectares/1,124 acres).

Culinary and medicinal herbs are grown on at least 481 hectares (1,188 acres); this includes 352 hectares (869 acres) of borage grown for essential oil production. Culinary and medicinal herbs are also grown in Saskatchewan by at least 20 producers but acreage data is not available.

## 2.3.2 Fruit and Nuts

British Columbia has the largest acreage in organic fruit trees with 450 hectares (1,111 acres) of which at least 283 hectares (700 acres) are apples; tree fruit is grown on at least 107 farms. In comparison Ontario has 251 hectares (620 acres) of apples on 16 farms and Nova Scotia has 36 hectares (88 acres) of apples on 8 farms. Blueberries and cranberries are important crops in Quebec with 631 hectares (1,558 acres) and 107 hectares (265 acres) respectively; the blueberry acreage is mainly wild land. British Columbia also has the largest number of organic vineyards with 22 totaling 80.7 hectares (199.3 acres); Ontario has six vineyards with 16.8 hectares (41.5 acres) total and Quebec reported one of 1.5 hectares (3.7 acres). The lower mainland of British Columbia produces almost all of the organic nuts in Canada.

### 2.3.3 Grains and Oilseeds

A total of 194,201 hectares (479,678 acres) was reported as being planted to grains and oilseeds. Saskatchewan has the largest acreage with at least 126,043 hectares (311,327 acres); an estimated 5-10% is missing (one certifier did not provide any crop breakdowns). Data is also missing for Ontario and Atlantic Canada.

The most important crops in terms of acreage planted are: wheat (Canada's most important organic export crop) with 72,560 hectares (179,223 acres); oats 30,493 hectares (75,317 acres); flax 29,777 hectares (73,550 acres); peas & lentils 15,799 hectares (39,024 acres) and soybeans 10,472 hectares (25,867 acres).

### 2.3.4 Forages, Pasture, Green manures and other land use

There was a great deal of variation in the amount of detail that was reported by CBs for these type of crops, therefore figures should not be considered total areas for each type listed.

In total, forage crops for feed and seed, permanent pastures, green manure crops and fallow make up 190,558 hectares (470,678 acres) of the certified acreage. An additional 112,791 hectares (278,593 acres) of wild range lands and native pastures were identified as being in the organic program.

## 2.4 Livestock on Organic Farms

Numbers of livestock in Table 8 include animals in all stages of production; for example dairy cattle numbers include milking cows and heifers; pigs include sows, boars and market hogs.

Poultry numbers and egg production in 2004 are lower than in 2003. In British Columbia it was probably as a result of the avian flu crisis and marketing board issues whereas in Ontario it may be because of missing data. In contrast, numbers of other livestock (beef and dairy cattle, sheep, goats and pigs) are higher than in previous years. From the number of laying hens reported it is estimated that 2,314,651 dozen organic eggs were produced in 2004.

**Table 8: Organic Livestock - number of head reported**

	CANADA	BC	AB	SK	MB	ON	QC	NB	NS	PEI
Layers	97459	48218	2310	420		10579	35532	400

### 2.4.1. Organic Milk Production

Organic milk production in Quebec, Ontario and British Columbia continues to rise with 35 million litres produced in the 04/05 dairy year compared with 30 million in 03/04. Further expansion of the organic dairy herd has occurred in 2005. According to the data compiled by the Dairy Section of AAFC, Quebec had the higher number of organic dairy farms and greatest volume of milk in 2004-2005 with 18,643,453 litres from 63 farms, followed by Ontario with 42 farms producing 10,300,000 litres. In British Columbia five farms produced 6,339,212 litres. In BC the premium for organic milk is 30 cents/litre whereas in Ontario it is 16 cents/litre and in Quebec 9.44 cents/litre

Figure 5: Organic Milk Production in Canada 2000-2005.

From data compiled by Dairy Section AAFC sourced from the Fédération des producteurs de lait du Quebec; Dairy Farmers of Ontario and the British Columbia Milk Marketing Board.

### 2.5 Value of Production 2004

- **British Columbia:** The estimated value of production in BC from certified organic farms is close to \$29.5 million - this includes small scale on-farm processing but not other processed products. The value of organic milk production in the 04-05 dairy year was \$5.1 million (based on average milk price of \$66.31/hl and 30 cents/litre premium). There is at least \$14 million in value-added product sales but data for most of the processors is not available.
- **Alberta:** Based on the limited amount of information available and extrapolating for the total number of certified farmers a value of \$26 million in gross sales is obtained, but it may not be a valid assumption that average sales figures are similar for each CB. According to Table 10 below, known crop acreage for 6 crops would generate close to \$9.5 million in crop sales. It is expected that data being collected by Rosalie Cunningham of Alberta Agriculture will shed more light.

- **Saskatchewan:** Based on information available the gross sales value is at least \$100 million and possibly up to \$150 million or more. Calculations for some crops based on acreage planted (see Table 10) only accounts for \$47 million.
- **Manitoba:** There is very little data available; possibly \$15 million in gross sales.
- **Quebec:** Based on the limited amount of information available and extrapolating for the total number of producers a value of \$68 million in gross sales is obtained, but it may not be a valid assumption that average sales figures are similar for each CB. The value of organic milk produced is estimated at \$13.4 million (based on milk price of \$62.70/hl plus premium \$9.44/hl). The value of production of corn, oats, soybeans, spelt and wheat is approximately \$9 million according to Table 11 below.
- **Ontario:** There is not enough information available to allow for any estimates for total gross sales. The estimated value of organic milk production in the 04-05 dairy year was \$7.2 million (based on milk price of \$63.51/hl and 0.16 cents/litre premium). According to Table 11 the value of production of corn, oats, soybeans, spelt and wheat is approximately \$15 million.
- **Atlantic Canada:** There is very little information available. Gross sales are expected to be higher than the \$2.65 million reported in 2003.

## 2.5.1 Value of crops based on acreage planted

### a) Prairie Provinces

The values used for calculations were obtained from approximating average values based on information from the tables of 'Purchase Prices for Organic Crops 2004 Crop Year' found on the University of Saskatchewan organic information website. It appears the sample size used to generate the data in these tables was very small and there was considerable variation across the region; therefore whether or not Table 10 provides any real insight is debatable.

Crop	Yield bu/ac	Price/bu	Alberta			Saskatchewan			Manitoba		
			Acre*	Quantity	Value	Acre*	Quantity	Value	Acre	Quantity	Value
Barley	20	\$5.00	4692	93840	\$469,200	13,689	273780	\$1,368,900	687	13740	\$68,700
Wheat	20	\$7.90	34122	682440	\$5,391,276	129885	2597700	\$20,521,830	7500	150000	\$1,185,000
Oats	48	\$3.50	13538	649824	\$2,274,384	50435	2420880	\$8,473,080	4332	207936	\$727,776
Rye	31	\$5.20	4272	132432	\$688,646	5822	180482	\$938,506	2109	65379	\$339,971
Flax	8	\$30.00	2784	22272	\$668,160	65792	526336	\$15,790,080	4332	34656	\$1,039,680
Kamut	14	\$11.00	699	9786	\$107,646	4175	50100	\$45,925	0	0	\$0
<b>Total</b>					<b>\$9,599,312</b>			<b>\$47,138,321</b>			<b>\$3,361,127</b>

\*Missing data, actual acreage greater

It is hoped that data (not yet available) from the Canadian Wheat Board will provide more accurate information regarding the value of the organic grain crops in Canada.

**b) Ontario and Quebec**

Calculations in Table 11 are based on organic yields estimated at 70% of conventional yields obtained from the OMFRA field crop statistics for 2004. The figure of 70% is somewhat arbitrary; there is considerable variation between farms and crops when comparing organic and conventional yields. Prices are based on prices paid in winter of 04/05; wheat price is for feed wheat.

<b>Table 11: Value of organic production for some crops - Quebec and Ontario</b>								
			<b>Quebec</b>			<b>Ontario</b>		
<b>Crop</b>	<b>Yield MT/h</b>	<b>Price/MT</b>	<b>Hectares</b>	<b>Quantity</b>	<b>Value</b>	<b>Hectares</b>	<b>Quantity</b>	<b>Value</b>
<b>Corn</b>	5.7	\$265	1210	6897	<b>\$1,827,705</b>	1477	8419	<b>\$2,231,009</b>
<b>Oats</b>	1.9	\$220	1422	2702	<b>\$594,396</b>	1057	2008	<b>\$441,826</b>
<b>Soybeans</b>	1.9	\$690	3715	7059	<b>\$4,870,365</b>	6480	12312	<b>\$8,495,280</b>
<b>Spelt</b>	3	\$400	234	702	<b>\$280,800</b>	2023	6069	<b>\$2,427,600</b>
<b>Wheat</b>	3.5	\$250	1416	4956	<b>\$1,239,000</b>	1601	5604	<b>\$1,400,875</b>
<b>Total</b>					<b>\$8,812,266</b>			<b>\$14,996,590</b>

It is not possible to estimate the total value of organic farm production in Canada with any degree of confidence but the various extrapolations used above suggest a value between \$250-350 million at the farm gate; this does not include the value of sales from processors.

### 3. PROCESSING AND HANDLING

A total of 742 processors and handlers were certified in 2004 which represents a 48% increase from the previous year. Increases were 155% in Ontario, 144% in Manitoba, 46% in British Columbia and 26% in Quebec. It may be that some enterprises were not identified in 2003 but even so increases have been dramatic.

The processing figures include seed cleaning and bagging which makes up the majority of the value-added processing in Saskatchewan and Manitoba, as well as production of livestock feeds and a whole range of food and beverage products (see Table 13). Some enterprises provide custom services or include one or more organic product lines; others have dedicated facilities. Handling operations include packing of fruit and vegetables, wholesale distributors, brokers and other traders.

Province	Total 2003	Total 2004	Percentage Increase	Unidentified	Processors Manufacturers	Seed Cleaning & Livestock Feed	Handlers & Traders	Composts & Soil amendments
BC	85	124	46%		84	3	37	
AB	52	53	2%	8	30	11	4	
SK	94	112	19%		32	67	13	
MB	27	66	144%		17	43	6

QC	152	191	26%	61S/93L			37	
NB	9	12	33%		8			4
NS	13	16	23%		13			3
PEI	3	3	0%		1	1	1	
NFL		1			1			
YK		1			1			
<b>Total</b>	<b>499</b>	<b>742</b>	<b>47%</b>	<b>162</b>	<b>306</b>	<b>141</b>	<b>126</b>	<b>7</b>

S – 5 employees or less; L - more than 5 employees

Quebec is the only province providing data on size of operation, reporting that 40% of organic processors have 5 employees or less.

**Figure 6: Certified Processors and Handlers 1997-2004**

The following tables give an idea of the range of products available as certified organic; but many certified enterprises, especially those in Quebec, were not identified by type.

Product /Enterprise Type	Number of Certified Enterprises
