About Canadian Organic Growers

COG is a national information network for organic farmers, gardeners and consumers.
Founded in 1975, we are a federally incorporated registered charity.

As well as producing the national magazine *The Canadian Organic Grower*, our activities include:

- Books, fact sheets and videos produced for growers, consumers and everyone interested in ecological food production.
- Farm and garden tours, demo gardens, farmers' markets, workshops and conferences organized by local chapters.
- The Mary Perlmutter Scholarship, awarded each year to a graduate student with research of benefit to organic growers.
- Working to achieve regulatory change, such as the Consumer and Corporate Affairs "Definition of Organic Food" and the Canadian General Standards Board's *National Standard for Organic Food Production*.

COG Aims and Objectives

- To work toward a decentralized, bio-regionally based food system which cuts transportation costs, builds local marketing structures, supports community development and promotes regional self-reliance in wholesome fresh food.
- To assist farmers and gardeners in developing sustainable practices of soil building and cultivation through education.
- To stimulate and support research and development in the area of sustainable food production.
- To promote the benefits of organic production and consumption to the public.
